

**If you are not sure and/or not familiar with these tasks,
please acquire the service of a qualified computer technician.**

Pre-Installation

- Start Windows operating system.
- Run Scandisk to scan your file system for errors and repair them if found.
- Verify that your system is not infected with viruses, worms, malwares, trojans and spywares.
- Create a second partition d:\ you can store all your dynamic data. (unprotect partition) ex: email, favorites, address book, my documents etc...
- Run Disk Defragmenter_ to defragment and reorganize your file system more efficiently.
- Disable all pre-installed anti-virus software. Your anti-virus can be enabled after EZRecoveryCard installation.
- Install install600.exe and Shut Down Windows.

Installation EZRecoveryCard

- Insert EZRecoveryCard into a empty PCI slot. Please make sure the card is inserted properly. Improper insertion may damage the card and/or cause the computer to hang.
- Turn on your computer and check the setting of CMOS to make sure the parameters of hard disk are correct:
 - * If there is **Boot From LAN First** or similar item, enable it in CMOS.
 - * Disable the **Virus Warning** item in CMOS setting.

For more installation instruction please read the user manual provided on a floppy disk
